MAIN SKILLS

JAVASCRIPT
NODEJS
REACT
MONGODB
DYNAMODB
HTML5, CSS
DESIGN PATTERNS
AWS
AGILE METHODOLOGIES

WORK EXPERIENCE

JUNE 2021 – RIGHT NOW
Senior Full Stack JavaScript Developer @ Emax digital (100% remote)
Emax digital offers their clients analytics and insights into their Amazon's search and sales performance. My work here is more or less a 50-50 split between backend (**NodeJS, NextJS, GraphQL** and **MongoDB)** and frontend (**React**). The development team is smaller than 10 people and my work includes challenges such as web crawling, task scheduling and prioritization, graphQL APIs, visual dashboards, responsive user interfaces, and many other.

JULY 2020 – JUNE 2021
Senior Full Stack JavaScript Developer @ Urbantz (100% remote)
Urbantz offers solutions to distribute, arrange, track and in general, manage deliveries. My work is ~50% split between front end (**React**), and back end work, both writing **NodeJS** code and interacting with **MongoDB** databases. Part of a team of about 10 developers spread across Europe.

APRIL 2018 – JULY 2020
Senior Full Stack JavaScript Developer @ Kodify (100% remote)
We run high traffic websites, and I work both in the **NodeJS** (and **MongoDB**) servers that we use to power the back end as well as the frontend, which we've built with **React**, Redux and Rxjs. Part of a team of about 12 developers spread across the whole of Europe.

NOVEMBER 2016 – APRIL 2018
Senior Front End Developer @ eDreams

Part of a very big team of front-end developers in charge of maintaining the group's websites and developing new features. Specifically, I was focused on the results page for mobile devices. Mostly **Vanilla JavaScript.**

JANUARY 2016 – OCTOBER 2016
Senior Front End Developer @ UNIDAYS
Mainly working with Design and QA departments to produce **React** frontends for the products and services that UNiDAYS offers. From analytics dashboards for partners, to the frontend for our main site or the corporate site of the company.

APRIL 2015 – JANUARY 2016
Freelance Web Developer @ ScrollWorks Ltd.
My own freelancing adventure, was mostly involved in a couple of big longer term contracts where I used **React** and **NodeJS** and also built some smaller websites for smaller clients.

AUGUST 2014 - APRIL 2015
Frontend developer @ Heart Internet Ltd. (HEG group)
Heart Internet is a web hosting company. I spent my time there building user interfaces for the different customer facing control panels. I only used **Vanilla Javascript**, since there was a no framework policy on the company at the time.

FEBRUARY 2014 - AUGUST 2014
Frontend developer @ Esendex Ltd.
I was mainly involved in the production of Esendex's new websites. I spent more time dealing with frontend related tasks but I also had to do fair amounts of backend (PHP) work.

JUNE 2013 - FEBRUARY 2014
Full stack web developer @ bcsAgency Ltd.
BcsAgency is a design agency, so my job as a developer there was mainly delivering custom builds inside content management systems. I would do equal amounts of both frontend and backend work.

MARCH 2012 - APRIL 2013
Junior Full stack web developer @ Kohdao Ltd.
I started working with Kohdao while I was still at university. I continued to work with them as a student before returning to university full time to focus entirely on my final year project. My job involved maintaining and improving various comparison websites that were owned by Kohdao. Again I was responsible for both the frontend and the backend of the websites.

FEBRUARY 2011 - MARCH 2012
Intern Web developer @ Taller 26 S.L.
When I joined, Taller26 was a new company interested in sponsoring young artists. My job there was, apart from helping them build their online presence, to help in shaping their platform, which combined a social network and an e-commerce platform.
